EXPERIMENT 25:

QUESTION:

Construct a C program to implement the I/O system calls of UNIX (fcntl, seek,stat, opendir, readdir)

PROGRAM:

```c
#include <stdio.h>
#include <fcntl.h>
#include <unistd.h>
#include <sys/stat.h>
#include <dirent.h>

int main()
{
    int fd;
    struct stat st;
    DIR *dir;
    struct dirent *entry;

    // Open/Create file
    fd = open("sample.txt", O_CREAT | O_RDWR, 0644);

    if(fd == -1)
    {
        perror("open");
        return 1;
    }

    printf("File Descriptor: %d\n", fd);

    // fcntl()
    printf("File Status Flags: %d\n", fcntl(fd, F_GETFL));

    // lseek()
    lseek(fd, 0, SEEK_END);
    printf("File Pointer moved using lseek().\n");

    // stat()
```

```
File Descriptor: 3
File Status Flags: 32770
File Pointer moved using lseek().
File Size: 0 bytes
File Information obtained using stat().

Directory Contents:
.
..
sample.txt
a.out
main.c

...Program finished with exit code 0
Press ENTER to exit console.
```
