

EXPERIMENT 24:

QUESTION:

Design a C program to demonstrate UNIX system calls for file management.

PROGRAM:

```
1 #include <stdio.h>
2 #include <stdlib.h>
3 #include <unistd.h>
4 #include <fcntl.h>
5
6 int main()
7 {
8     int fd;
9     char buffer[100];
10    int n;
11
12    // Create a file
13    fd = creat("sample.txt", 0644);
14
15    if(fd == -1)
16    {
17        perror("File creation failed");
18        return 1;
19    }
20
21    printf("File created successfully.\n");
22    close(fd);
23
24    // Open file for writing
25    fd = open("sample.txt", O_WRONLY | O_APPEND);
26
27    if(fd == -1)
28    {
29        perror("File opening failed");
30        return 1;
31    }
32
33    File created successfully.
34    File contents:
35    Hello, UNIX System Calls!
36    File deleted successfully.
37
38    ...Program finished with exit code 0
39    Press ENTER to exit console.
```
