

CSA0404 – OPERATING SYSTEMS

EXPERIMENT 40

QUESTION

Illustrate the various File Access Permission and different types of users in Linux.

PROGRAM

The image shows a code editor window with a C program and a terminal window showing its execution. The code editor has a toolbar with icons for Run, Debug, Stop, Share, Save, and Beautify. The language is set to C. The code is as follows:

```
1 #include <stdio.h>
2 #include <stdlib.h>
3 #include <sys/stat.h>
4
5 int main() {
6     char filename[] = "file.txt";
7
8     FILE *file = fopen(filename, "w");
9     if (file != NULL) {
10         fclose(file);
11     }
12
13     int new_permissions = S_IRUSR | S_IWUSR | S_IRGRP | S_IWGRP | S_IROTH;
14
15     if (chmod(filename, new_permissions) == 0) {
16         printf("File permissions changed successfully.\n");
17     } else {
18         perror("chmod");
19         return 1;
20     }
21
22     return 0;
23 }
24
```

The terminal window shows the output of the program:

```
File permissions changed successfully.
...Program finished with exit code 0
Press ENTER to exit console.
```
