

QUESTION 2:

Identify the system calls to copy the content of one file to another and illustrate the same using a C program

CODING:

```
1 #include <stdio.h>
2 #include <fcntl.h>
3 #include <unistd.h>
4 #include <stdlib.h>
5
6 int main()
7 {
8     int source, destination;
9     char buffer[1024];
10    int bytesRead;
11
12    // Open source file in read mode
13    source = open("source.txt", O_RDONLY);
14
15    if (source < 0)
16    {
17        printf("Error opening source file.\n");
18        return 1;
19    }
20
21    // Create/Open destination file in write mode
22    destination = open("destination.txt",
23                      O_WRONLY | O_CREAT | O_TRUNC, 0644);
24
25    if (destination < 0)
26    {
27        printf("Error opening destination file.\n");
28        close(source);
29        return 1;
30    }
31
32    // Copy file contents
33    while ((bytesRead = read(source, buffer, sizeof(buffer))) > 0)
34    {
35        write(destination, buffer, bytesRead);
36    }
37
38    // Close files
39    close(source);
40    close(destination);
41
42    printf("File copied successfully.\n");
43    return 0;
44 }
```

Output: Error opening source file.
